GOING LIVE 31 AUGUST

Braino 

A companion for everyone.

A co-founder for founders.

START HERE

One character. Two jobs.

Braino is not an app you open and close. He is one character with one memory who shows up on the screen you are already looking at. That character does two jobs, and the split between them is the whole strategy: the one who already knows you is the one you end up hiring.

one mind, one memory

THE COMPANION · FREE

Free. For your life.

- **No context switching.** He is already on the tab you are on, so there is no new window, no copy-paste, and nothing to explain to him.
- **Records meetings and lectures.** And writes the notes while they happen, so you leave with the notes already done.
- **Runs browser tasks on command.** The small repetitive things you do by hand every day, done by asking.
- **Remembers you.** What you are building, how you talk, what you already said no to. Same person tomorrow.

Free, usage-capped. $15 a month for unlimited.

THE CO-FOUNDER · PAID

Hired. For your company.

- **Same face, same memory.** A different job. You never brief him from zero, because he was already there.
- **Runs distribution end to end.** Content, optics and outbound, on one spine that holds the context.
- **Never posts without you.** Everything waits in one approval inbox. Nothing reaches the public around it.
- **Pushes back.** He will tell you an idea is weak rather than praise whatever you just said.

Paid. It does real work.

THE FREE HALF, AND WHY IT IS FREE

The companion is not charity. It is the funnel.

Charging someone to have a friend on their screen is a bad business and a worse product. So the companion is free, and it does the job a marketing budget would otherwise do: it is how a founder meets Braino, months before they ever have a reason to pay him.

- **Free users, at near zero CAC**
  The product is the acquisition channel.
- **Brand awareness that compounds**
  A character gets talked about. An ad does not.
- **Virality, structurally**
  He lives on other people's screens, in public.

The benchmark we are playing against
2.6% median freemium conversion in B2B SaaS.
Top quartile 5-8%. Above 10% is exceptional.

Sources. Freemium conversion benchmarks, OpenView 2025 Product Benchmarks via Userpilot. The pattern is Canva, Notion and Figma: a genuinely useful free tier that produces its own creators, who bring the next wave, at almost entirely organic acquisition.

PRIMARY RESEARCH · EIGHT STRUCTURED INTERVIEWS, AUGUST 2026

Nobody pays for this. Everybody needs it.

"Distribution is my biggest bottleneck. I would actually buy this."

Sidhant · CareKin

Learned these tools existed during our interview. Ready at $21 a month.

"Scripts are the headache. Making videos is easy. Knowing what to say isn't."

Sai Karan · LazyTyper

Built his own bot rather than pay for a tool. Says a normal founder pays $100+.

8/8

say distribution is the biggest unsolved problem

0/8

pay for a single distribution tool today

3

said "I would buy this" on the spot

$16-32

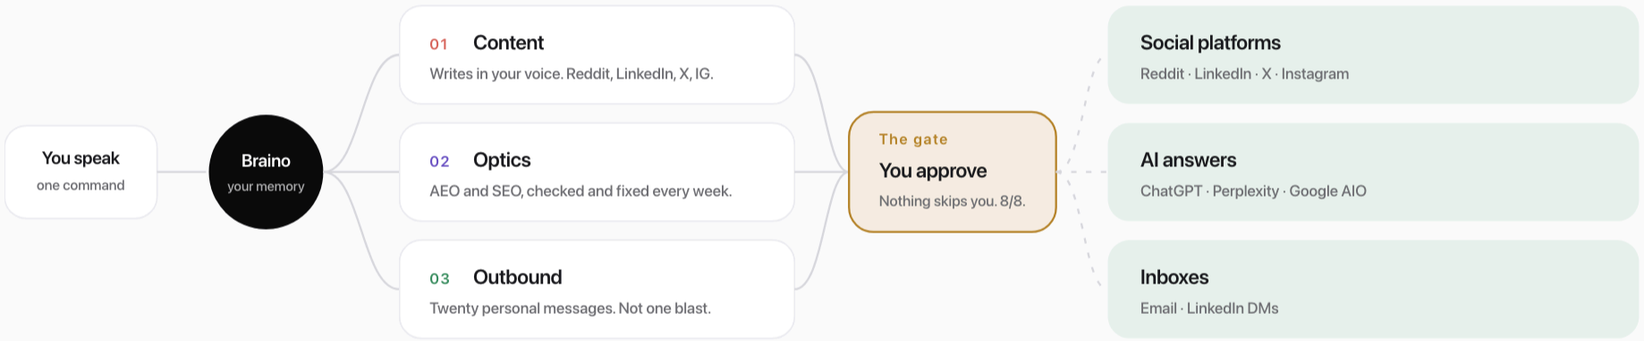

a month, the India band they named themselves

Their three options today, and why each fails. Do it themselves — ten hours a week, eating the time they needed for building. Build their own hacks — scripts and bots that break, a patch and not a system. Hire experts — $700-1,000 an hour, which only funded companies can afford.

THE PAID HALF, DRAWN

Three engines. One gate.

Overlay all eight founders' weeks and whatever repeats is the union: three jobs, not six, on one spine that holds the context. Roughly 80% of a founder's distribution week. Inbound was cut, because zero of eight asked for it.

Content · one update, five places — ENGINE 1

Reddit | LinkedIn | X | Instagram

Shipped dark mode after three people asked in the same thread. The hard part was not the colours — it was every chart and badge we had hard-coded.

Learned from 200 of your own posts · long for Reddit, short for X

Optics · this week's check — ENGINE 2

"Best expense tracker for freelancers?" · asked weekly

ChatGPT	Names 4 tools. Not you.	INVISIBLE
Perplexity	Cites your Reddit answer.	NAMED
Google AIO	Competitor's pricing page wins.	INVISIBLE

HOW BIG THE OPPORTUNITY IS

Big market. A real slice of it.

The wallet exists. It is just not being spent on this yet: 66% of small business owners spend under $1,000 a year on marketing, and zero of our eight founders pay for a distribution tool at all. We are not asking anyone to switch. We are the first thing they buy.

TAM
$17.9B

29.8M one-person businesses in the US alone, at $600 a year each — one $50/mo tool.

US Census · WebFX martech benchmark

SAM
$1.3B

2.2M founders who build with AI, in English markets and Indian metros.

Solopreneur AI adoption · DPIIT

SOM
$39M

65,000 paying founders at $16-99 a month, reached via Mesa, agencies and the companion.

Year three target

And the ground just moved. 37% of product discovery now starts inside an AI answer rather than a results page (Profound), those referrals convert at 14-16% against 1.8% for Google organic (Omnibound), and 82% of brands have no AI-visibility strategy at all (Erlin). Citations churn about 23% a month (AirOps) — which is what makes this weekly work, and weekly work is recurring revenue.

WHY THE ALTERNATIVES FAIL

Every tool does one piece. You do the rest.

WHAT IT DOES	PRICE	WHAT IT LEAVES YOU
Posts for you Buffer · Postiz	$15-49/mo	You still write every word.
Finds people for you Apollo · Clay	$50-100/mo	You still write every message.
Measures AI visibility Peec · Profound	$99-399/mo	Tells you that you are invisible. Does not fix it.
Builds the product Lovable · Cursor	$25-200/mo	The thing exists. Nobody knows it does.
Does all of it GTM consultants	$700-1,000/hr	Only funded companies can afford it.
Writes, posts, gets you named, reaches out BRAINO	$16-200/mo	One tap. That is the whole job.

The only thing on the market that does the whole job is a human at $700 an hour. **Everything a founder can actually afford makes them do the work themselves.**

HOW WE MAKE MONEY

Free companion. Paid co-founder.

FREE

Companion

$0

Everyone with a screen. Capped by usage.

The top of the funnel, and the relationship.

CONSUMER

Companion Pro

$15/mo

The cap comes off, for the people who live in him.

Pays for the free tier's inference.

THE PRODUCT

Foundry

$16-32/mo

India. $49-99 globally, $200+ at revenue stage.

Anchored to what eight founders said out loud.

DONE FOR YOU

We run it

$260-525/mo

After a free first month. Dinebees signed.

Highest margin, fastest learning, paid research.

WHERE WE ARE TODAY

1 service client signed — Dinebees, 10K downloads

3 founders in closing at their own stated price

25 founder conversations banked

120 Mesa founders to sell into next

One currency, throughout. The India prices are the founders' own rupee numbers — ₹1,500-3,000 and ₹25-50K — converted at ₹95.2 to the dollar, the rate on 26 August 2026. **Why the service tier is not a distraction.** Zero of eight founders pay for a tool, so we sell the result rather than the software — "we will get your product in front of buyers" is the pitch. Every task we repeat by hand for three clients becomes a Braino feature, which makes the done-for-you tier paid research with the highest margin on the page.

QUARTER ON QUARTER

What ships, and who is paying by then.

	Q3 2026	Q4 2026	Q1 2027	Q2 2027
Product	Content + Optics live. Approval inbox ships with v1. Launch 31 August.	Outreach: personal drafts at scale, gated. One dashboard across all three.	Braino Code. The co-founder starts building the product, not just distributing it.	End to end. Idea to shipped to seen, one memory across all of it.
Companion	2,000 free	10,000 free	30,000 free	75,000 free
Foundry	10 paying	60 paying	200 paying	500 paying

Service	3 clients	6 clients	10 clients	15 clients
Revenue	$1.2K MRR	$4.8K MRR	$15K MRR	$40K MRR
AI cost	-$216	-$955	-$2.8K	-$6.8K
Gross profit	$984 · 82%	$3.8K · 80%	$12.2K · 81%	$33.2K · 83%

The free companion feeds Foundry, and the service tells us what to build next. Braino Code lands in Q1 2027, once distribution is working. **How the AI cost is worked out:** everything runs on gpt-5.6-luna at $0.20 per million input tokens and $1.20 per million output, the price OpenAI set on 30 July 2026. Per active seat, per month: 0.5M in / 0.07M out for a usage-capped free companion ($0.18), 12M / 2M for a Foundry seat ($4.80), four times that for a run-it-for-you client ($19.20), and free signups counted at 30% monthly active. **The free tier is 51% of the AI bill in Q3 and 61% by Q2 2027 — that line is the acquisition budget, and it is why the companion can stay free.**

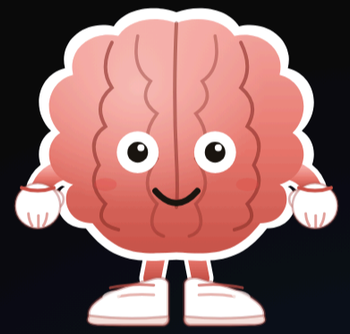

GOING LIVE 31 AUGUST

Let's make distribution the easy part.

A companion for everyone. A co-founder for founders.

Speak and watch it happen.
