Braino

A companion who runs your day with you.

Habits, focus and daily routines. Nobody logs anything.

Itish Pande · Mesa School of Business · September 2026 · trybraino.com

The problem

Everyone downloads one. Everyone quits within a month.

43%

abandon a habit tracking app inside 30 days. 52% inside 60.

4.1%

of productivity app users are still there on day 30. The category average is 7%.

72%

disengage from lifestyle and wellbeing apps within 90 days.

#1

reason given for quitting is the daily logging itself. Not the price, not the features.

AND IT IS THE SAME FAILURE EVERY TIME

These apps report your past. They do not do anything about your present.

You are asked to remember, open the app, and type in what you already did. The one moment you needed help was an hour ago, and nothing was watching.

What people use today

Three options. Every one of them waits for you.

OPTION ONE

Track it yourself

Streaks, Habitica, Notion, Todoist.

- A grid you tick and a list you keep
- **You do the logging**, every single day
- Break the streak and 44% never come back

OPTION TWO

Block and measure

Freedom, Forest, Rize, Screen Time.

- Blunt blocking, or a report after the fact
- **No idea what you were trying to do**
- It tells you the week went badly. Nothing else

OPTION THREE

Pay a person

A coach, a therapist, an accountability partner.

- It works, and everybody knows it works
- **$100 an hour**, once a week at best
- Not there at 3pm on a Tuesday, which is when you need it

All three need you to show up, remember, and type. The person who has already run out of discipline is the person being asked to supply it.

What is Braino Companion?

One companion. He runs your day with you.

He is already on the screen you are working on. He sees what you did, so you never have to tell him.

WHAT THE COMPANION DOES FOR YOU

- Sets your whole tracker up in **one conversation, out loud**
- Watches your screen, so he **knows what you actually did**
- Speaks up **once**, when it matters, and then goes quiet
- Runs your **focus sessions**, your music and your breaks
- Takes the **repeated parts of your day** off you entirely
- **You never fill in a form**

FREE · EVERYONE

Braino Companion

Your tracker, your morning list and one focus session a day. **Our acquisition channel, at zero CAC.**

PAID · $15 A MONTH

Braino Pro

Unlimited focus, full voice, and the routines that run themselves.

He watches only when you switch him on, and nothing runs on your machine until you say yes.

Inside the companion

Three jobs. One day, run with you.

Habits — THE GOAL

You keep the promises you made out loud

- One voice conversation builds **the whole tracker**
- Broken into **daily, weekly and monthly** targets you can edit
- At night you say what you did. **He fills it in while you speak**

Focus — SERVES HABITS

You stay in the thing you sat down to do

- Notifications off, **your music on**, a timer you can see
- He notices you drift and **asks once**, without blocking anything
- Breaks you actually take, because he takes them with you

Routines — SERVES HABITS

The repeated parts of your day stop being yours

- He learns **what you do every morning** by watching you do it
- Offers to take it over, then **does it**
- The email triage, the news, the same four tabs, every day

Habits is what you want. Focus keeps you at it, and routines clear the time to get to it.

How it works

You talk. He watches. Nobody logs anything.

You say it, once › He watches the day › He speaks up once › You say how it went

Morning. The list finds you

He greets you and asks if you want today. The list drops down from the notch. You did not open an app or type a word.

All day. One suggestion, not a stream

He checks the screen every half hour and usually says nothing. When it matters the notch shows one suggestion, you read it when you want, and then he is quiet again.

Evening. You talk, the bars move

He asks what you got done. You just speak. The tracker fills in live in front of you, and tomorrow starts from what you did not finish.

Setup is one conversation. Everything after it is him.

Our customer

Two customers. One problem.

PRIMARY

The student and the young professional

- Lives on a laptop **eight hours a day**
- Has tried **three habit apps** and quit all of them
- Already pays for ChatGPT or Notion, so **the habit of paying exists**
- Wants a routine, **not another dashboard to fill in**
- Pays **$5 to $15 a month** for something that saves time

SECONDARY

The solo builder

- Nobody sets their day for them, so **the day sets itself**
- Loses the afternoon and cannot say where it went
- Wants **the repeated parts of the day gone**, not tracked
- Pays more, and is **already our Foundry customer**

Both spend their whole day in front of the one machine Braino already runs on, and both have already paid for a tool that asked them to log and got abandoned.

How big is the opportunity?

The market, in three numbers.

TAM

$12.0B

- **1 billion knowledge workers** worldwide
- **10%** already pay for a habit, focus or productivity app
- **$120 a year** each. One $10 a month tool

Gartner · Grand View · Straits Research

SAM

$1.3B

- **11M desktop-first workers** we can actually run on
- English-speaking markets **+ Indian metros**
- Already paying for **at least one** subscription

Mac and Chrome installed base

SOM

$18M

- **100,000 paying users**
- **$15 a month**
- Reached via Mesa, campuses and the free tier

Year three target

THE WALLET IS ALREADY OPEN. IT IS BEING SPENT ON THINGS PEOPLE QUIT.

Habit tracking apps alone are $2.2B in 2026, inside a $53.7B personal development industry. 60% of everyone who pays for AI spends $20 a month or less.

We are not asking for a new budget. We are asking for the $15 that is currently going to an app nobody opened this week.

Why nothing else does this

Every tool does one piece. You are still the glue.

CATEGORY	WHAT IT DOES	WHAT IT STILL LEAVES YOU	PRICE
Habit trackers Streaks, Habitica, Way of Life	A grid you tick	The logging. Every day, forever, by hand	$3–5
Planners Sunsama, Motion, Todoist	Plans your calendar	It plans. It never watches, and it cannot act	$8–25
Focus blockers Freedom, Forest, Opal	Blocks apps, runs a timer	No idea what you are working on. Blunt by design	$3–9
Time trackers Rize, RescueTime, Screen Time	Reports where the time went	A verdict after the fact. Nothing changes on the day	$10–17
AI chat ChatGPT, Claude, Gemini	Answers when you open it	It does not know your day, and it never starts the conversation	$20
Braino Companion Mac and Chrome	Watches, remembers, and acts	Nothing. He sets it up, sees it, and does it	$15

Every one of these has to be opened and told what happened. Braino is already on the screen and already knows.

How we make money

Free to start. Paid when it works for you.

EVERYONE

Braino Companion

Free, capped

- The tracker, built by voice
- Morning list and evening check-in
- **One focus session a day**
- Capped, not unlimited. It is the top of the funnel

MOST PEOPLE

Braino Pro

$15 / month

- Unlimited focus and full voice
- **Routines that run themselves**
- The agent that opens, reads and does
- Our core number. Everything is priced off this

FOUNDERS

Braino Foundry

$49 to $99 / month

- The same companion, now running distribution
- **Pro is included**
- The companion is how a founder meets us at zero cost

WHY $15 CLEARS

60% of everybody who pays for AI already spends $20 a month or less, and the median AI household spends exactly $20.

$15 sits inside a budget that exists. We are replacing an abandoned subscription, not asking for a new one. Prices in USD.

What we ship

Most of this already runs.

BUILT AND RUNNING

The hard parts

- **Screen watching** on the Mac, every 90 seconds
- **Voice and dictation**, one shortcut, no typing
- The **notch** on Mac and Chrome
- **Memory** that keeps facts about you from ordinary talk
- The **agent** that opens apps, plays music and runs tasks

SHIPPING NOW

The companion

- The **habit tracker** and its data model
- The **onboarding conversation** that builds it
- **Silent suggestions** in the notch, every 30 minutes
- The **evening check-in** that fills the bars by voice
- Focus sessions and breaks

NEXT

Routines

- He **spots the pattern himself** and offers to take it over
- Focus that carries to the **phone**
- Routines people can **share with each other**
- The dashboard as the record of a year, not a week

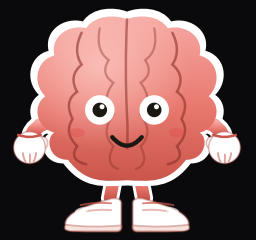

The companion is not a new product. It is a direction for the machine we already built: the watching, the voice and the agent already run, and the tracker sits on top of them.

PRIVATE TESTING · WAITLIST OPEN

Talk.
He does the rest.

One companion for your habits, your focus, and the parts of your day you never wanted to do yourself.

Make every day feel a little less boring.

(he is adorable, we know)
