Braino

Free companion.
Premium foundry.

Everyone gets a companion for nothing. Founders pay for the two things that actually decide whether a company happens.

What problem am I solving?

Solo founders die in exactly two places.

They cannot build it, or nobody sees it. Almost every other problem is survivable. These two are not.

1 in 10

Ideas that reach a working product at all

~9 mo

Typical time from idea to a shipped first version

Most

Products that ship and are never seen by anyone

AI already writes the code, so building stopped being the bottleneck. **Deciding what to build, and getting it seen, did not.** That is the gap nobody has closed, because it needs one thing that holds both ends.

Who is my customer?

Everyone is the audience.
Founders are the customer.

FREE · THE AUDIENCE

Braino Companion

Students, professionals, researchers, anyone who builds anything.

- Solves context switching and lost flow
- Costs me nothing to acquire: word of mouth
- Gives me the network, and the founders inside it

PAID · THE CUSTOMER

Braino Foundry

Founders, idea stage to traction. English speaking, internet access.

- Solves can't build it, nobody sees it
- Pays $3K to $5K a build, $199 to $5K a month
- Is 5 to 10% of free users, and all of the revenue

Not everyone is a founder, but everyone wants a better companion. The free tier is not a loss leader. **It is how I find the founders.**

How big is the opportunity?

A wide free top.
A narrow paid middle.

LAYER	TAM	SAM	SOM	HOW I GET THERE
Braino Companion Free, global	$50B+	$5B to $10B	$500M to $1B in 5 years	50M active users, 5 to 10% convert to Pro
Braino Foundry Founders only	$2.5B	$500M	$50M to $100M in 3 years	10K to 15K founders at $5K to $8K a year

The free TAM is twenty times the paid one, and that is deliberate. Only **5 to 10% of free users are founders**, and those are the only ones I need to monetise. The rest are the moat: every interaction makes him better.

What is my product?

One co-founder.
Two engines.

An idea
Spoken, in your words

→

Braino Code
Idea to a shipped MVP

→

Distra
MVP to actually seen

Working today, not planned. A spoken sentence becomes a live, designed website in about four minutes, and then "make the background red" lands in fourteen seconds by changing one line instead of rebuilding.

THE ALTERNATIVE TODAY	WHAT IT STILL LEAVES YOU	BRAINO
AI code tools Cursor, Lovable, v0	A faster editor. You still decide, design, and do the distribution.	One sentence, spoken. He decides and builds.
Social tools Buffer, Hootsuite	A scheduler. It does not know what you built or who to reach.	One brain, both ends. Distra feeds Code.
Agency or freelancer	$15K and six weeks, then you own the relationship forever.	Four minutes. Changes land in fourteen seconds.

How will I make money?

Free scales the network. Foundry scales revenue.

COMPANION

$90M ARR at scale

$0 CAC, word of mouth

$15/mo Pro, 5 to 10% convert

$180 LTV a year, per Pro user

10M users at 5% is 500K paying

FOUNDRY

$60M ARR at scale

$3K to $5K a build, Braino Code

$3K to $8K a year, Distra

$9K to $24K LTV over three years

$500 CAC, paid back in 2 to 4 months

$150M ARR at scale, and the two halves are not independent: the free layer is the acquisition channel for the paid one, which is why Foundry CAC is $500 instead of the $3K to $8K this category normally pays.

The proof

60 out of 60 asked "when can I try it?"

A new product typically converts 10 to 20% of demos into trial interest. Cold start is the hard problem, and it is the one I have already cleared.

120

Mesa founders, my first wedge. 30 to 50% convert.

750

Hyderabad founders reachable in month one or two.

~950

Commits in three months. One person, building.

Braino is a waitlist today, not a launched product. **The next number that matters is the first founder who pays**, and both wedges above are people I can already reach by name.
